DETAILED ACTION

Applicants' amendment dated 06/29/2005 has been received and entered. By the amendment, claims 1-24 are remain pending in the application.

Applicant's arguments dated 06/29/2005 have been considered but are moot in view of the new ground(s) of rejections as follow.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mathew et al., US Patent 6,356,334, in view of Kamiya, US Patent No. 6,034,751.

Regarding claims 1-5 and 7-24, Mathew et al. disclose a liquid crystal display (LCD) assembly (figures 6 and 10) comprising:

- . a containment structure (72) as claimed;
- . an LCD cell including a die (43), a pixel array (45), a transparent plate (46) and a liquid crystal material (51);
- . an adhesive material (47);
- . a support material (tape 75);
- . a thermal support layer (thermal grease with about 0.5mm to about 1.0mm thickness) as claimed.

Art Unit: 2871

Mathew et al does disclose a plurality of spaced apart stabilizers (retaining members 4a, 4b) couple edge portions of an LCD cell (see figure 5). Therefore, it would have been obvious to one skilled in the art to employ a plurality of retaining members in the Mathew et al. as shown by Kamiya in order to absorb an applied shock while retaining an LCD panel detachably (col. 2, lines 40-41).

Regarding claim 6, the modification to Mathew et al. device discloses the claimed invention as described above except for the Alloy Ash 42 based material for the substrate of the containment structure. It would have been obvious to one having ordinary skill in the art at to use the Alloy Ash 42 as a containment substrate material since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 3, 6, 9 and 21 of U.S. Patent No. 6,476,885.

Art Unit: 2871

Although the conflicting claims are not identical, they are not patentably distinct from each other because both application and the patent disclose the same LCD assembly with a plurality of spaced apart stabilizers arranged to couple edge portions of the LCD cell.
